

Idea: Stop losing money for fake documents instead use AI detective to analyze document and frauds in seconds.

Idea Description: A system that helps people to understand the contract clauses and highlighting risky/unfair terms also it can help banks, insurance companies, and real estate firms automatically detect suspicious/fraudulent claims and documents before processing them hence saving money and time.

How it works:

1. Person uploads rental agreement, loan contract, employment offer, insurance policy, pdf claims
2. Document AI extracts all text, dates, amounts names
3. Gemini analyses the document clause, dates, amounts and identifies:
 - Unfair terms
 - What could go wrong
 - compares it to market standards
 - Negotiable clauses
 - Checks whether dates, amounts make sense
4. Benefits the person by highlighting risky/unfair terms, and big firms analyse claims faster than usual

I would like to explain my idea with real life example:

The problem:

1. ICICI receives **50 insurance claims per day**. Each claim needs 2-3 hours of manual review:

- Is claimant really who they say?
- Does claim date fall within policy period?
- Do hospital charges match claimed amount?
- Is medical history consistent?

My system flags it as:

FRAUD SIGNAL 1: Amount inflation

Hospital bill: ₹3,50,000

Claimed: ₹5,50,000

Discrepancy: 57% OVERSTATED

FRAUD SIGNAL 2: Name inconsistency

Policy: "Rajesh Kumar Singh"

Hospital bill: "Rajesh K Singh"

Bill witness: "Rajeesh Kumar Singh" = 3 different spellings (copy-paste from multiple sources)

FRAUD SIGNAL 3: Duplicate claim detected

Same accident date (10-Feb-2024)
Same hospital (Apollo Hospital, Delhi)
Same bill total (₹3,50,000)
Found 2 other similar claims from different "claimants"
= RING FRAUD (organized claim duplication)

In similar way we can analyse corporate bonds and real estate frauds.

2. Rental Terms:

Monthly Rent: ₹25,000

Rent Increase:

"Landlord can increase rent by 20% every year without notice or agreement from tenant."

Damage Clause:

"Tenant is liable for ANY damage to property, regardless of who caused it or whether negligence occurred."

Lock-in Period:

"Tenant cannot break lease for minimum 2 years. If tenant leaves early, forfeit entire 2 years deposit."

Maintenance:

"Maintenance charges at landlord's sole discretion, can be increased anytime without notice."

Modification:

"Tenant cannot paint walls, install shelves, or make any modifications. Not even removable items."

My system flags it as:

HIGH RISK CLAUSES:

1. RENT INCREASE CLAUSE

Text: "20% increase every year"

Risk Level: VERY HIGH

Explanation: This is 4x higher than legal maximum

Market Standard: RBI guidelines cap increases at 5% annually

What Could Go Wrong: In 5 years, you'll pay ₹2,00,000 extra

What to Negotiate: Cap increases at 5% + require 3-month notice

2. DAMAGE LIABILITY CLAUSE

Text: "Tenant liable for ANY damage, regardless of fault"

Risk Level: VERY HIGH

Explanation: This is illegally broad. Landlord responsible for structural damage

Market Standard: Tenant responsible for accidental damage only

What Could Go Wrong: Wall cracks? Tenant pays ₹50,000. Roof leak? Tenant pays ₹2,00,000

What to Negotiate: Exclude structural damage, major repair, wear & tear

3. MAINTENANCE CHARGES

Text: "At landlord's sole discretion, can increase anytime"

Risk Level: HIGH

Explanation: No limits = landlord can charge anything

Market Standard: ₹100-200/sq ft, fixed for 1 year

What Could Go Wrong: Landlord charges ₹500/sq ft randomly

What to Negotiate: Cap at ₹150/sq ft with no increases mid-lease

NEGOTIATION PRIORITY (in order):

1. Fix rent increase (save ₹2,00,000)
2. Fix damage clause (save ₹50,000-₹2,00,000)
3. Remove lock-in period (save ₹75,000 + flexibility)
4. Cap maintenance charges (save ₹20,000/year)
5. Allow removable modifications

ESTIMATED SAVINGS: ₹2,00,000-₹3,00,000 over 5 years
